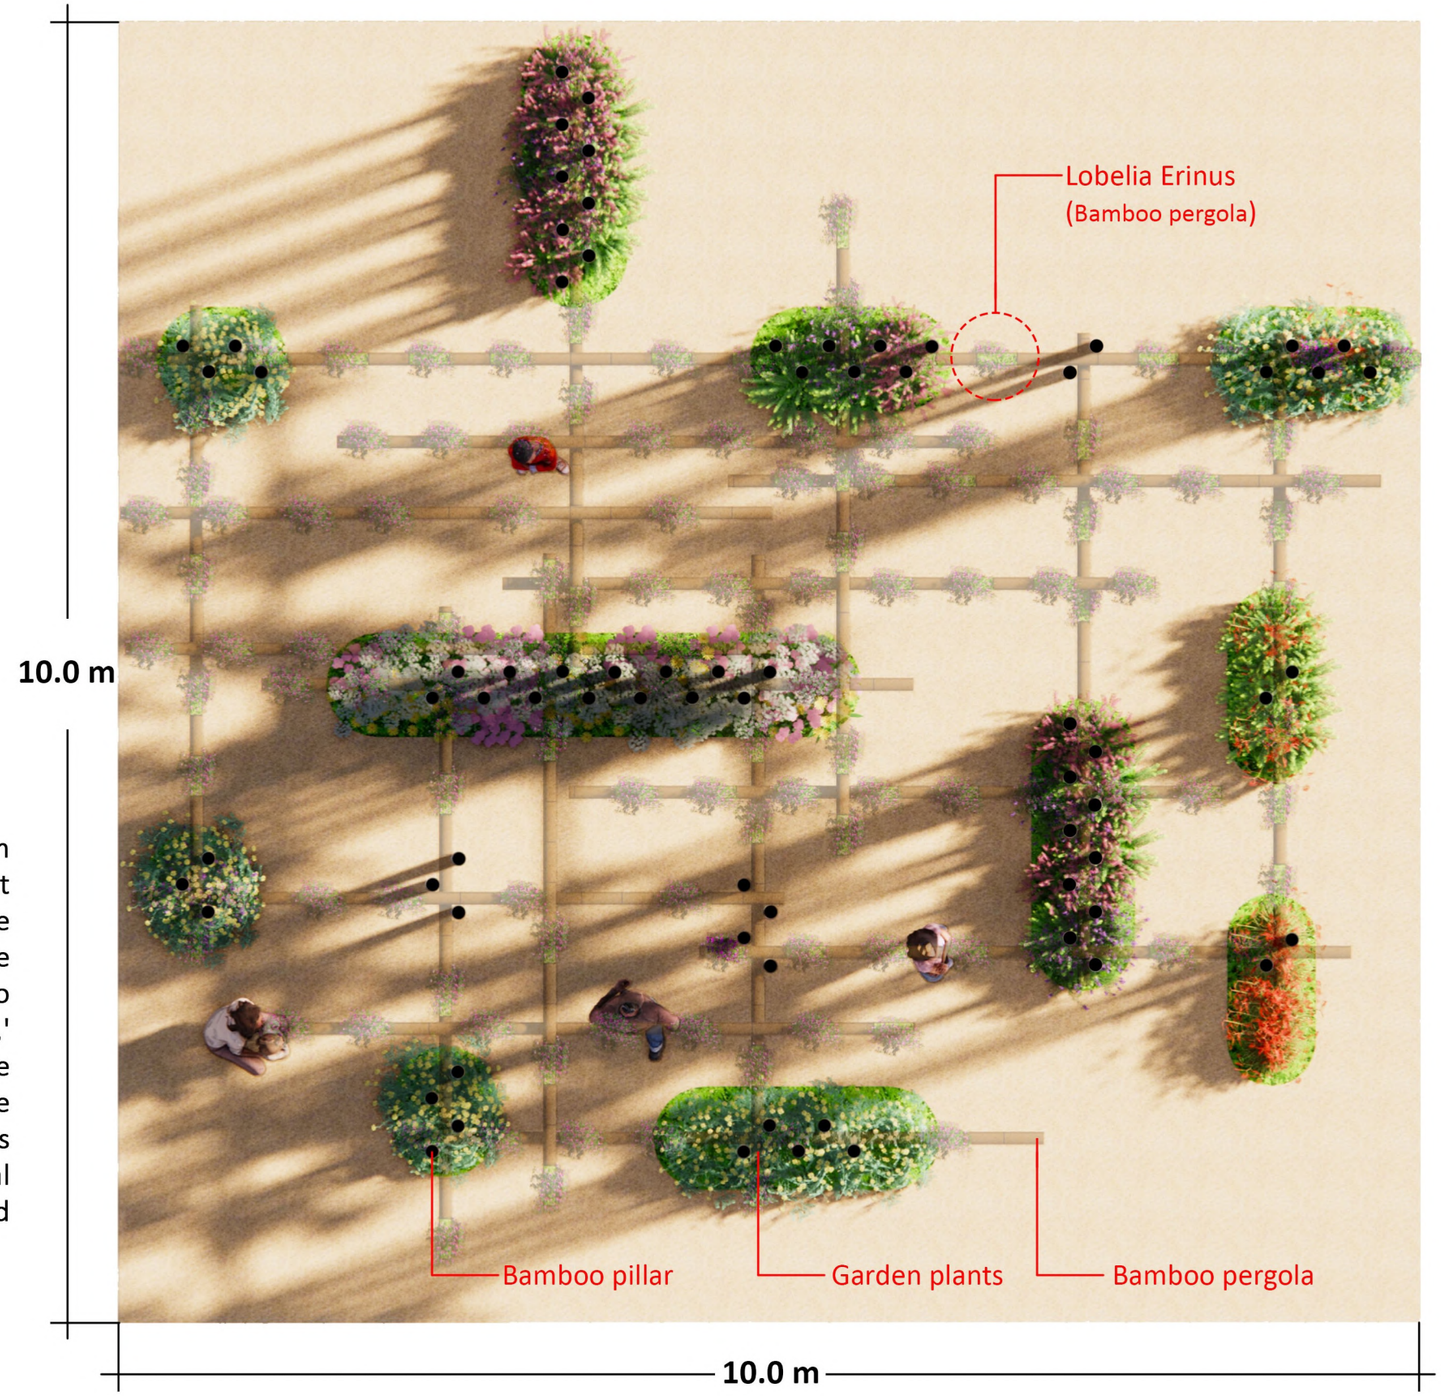
ENTANGLEMENT

I have conceived a garden named 'Entanglement,' inspired by quantum entanglement, where all elements are interconnected, reflecting the premise that the state of one affects the other. The essence of this garden lies in its sustainable and recyclable nature, aligning with the motto 'The ecology of possibilities.' The central structure is a 10x10 meters space with randomly distributed bamboo pillars, each supporting a peculiar horizontal pergola, called 'Entanglement,' formed by bamboo with cuts that allow for the cultivation of hanging plants. The base of the pillars houses plants and flowers, blending harmoniously with the surrounding vegetation. This unique design, located in Quebec, Canada, invites people to immerse themselves in a natural environment without artificial elements, ensuring that, at the end of the festival, all components can be recycled without negative environmental impact.



Phyllostachys Edulis

Coral Bells

Achillea Millefolium

Astilbe Arendsii

Tanacetum Vulgare
