

## L'Escarpolettes

*L'Escarpolettes celebrates childhood nostalgia by referencing our playgrounds placed in the swaths of green grass at the parks, the concrete landscapes in the cities, and the golden hue of the countryside. The design reverberates with memories of laughter and the competition to go the highest on the swings.*

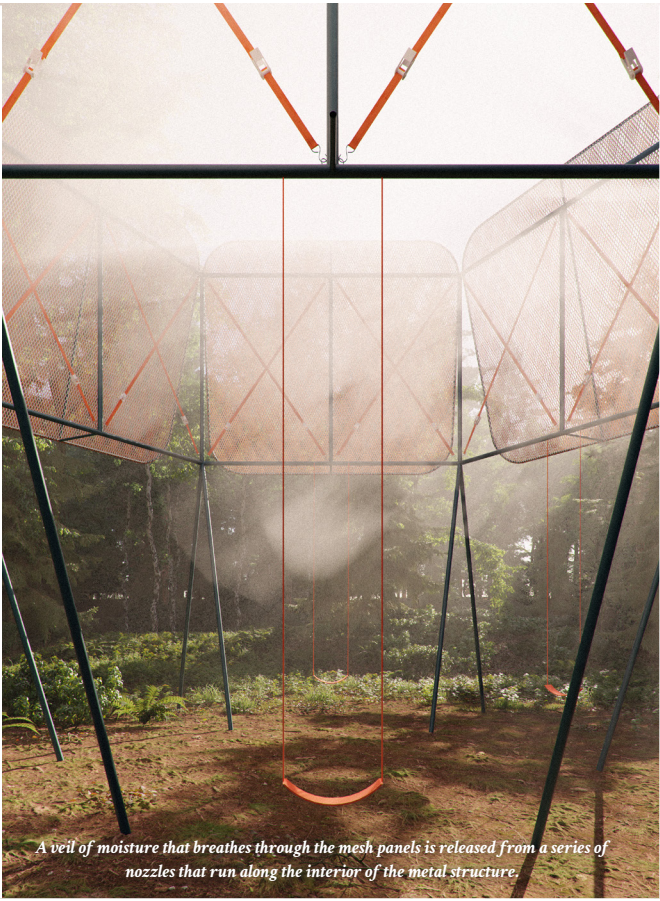

*The hexagonal form is composed of an inventory of harmonious components. The teal-coloured powder-coated installation is crowned with mesh nets pulled taut over frames made from metal pipes. They filter the sun into puddles of dappled light that dance across the ground. The orange fabric strap cross-bracing matches the vibrancy of the six swings that wait for the next group of visitors to play together and kick their feet into the sky. A rudimentary irrigation system breaks the forest's silence with a whispered hiss and an ambient mist of water droplets that moisten and cool the air.*

*L'Escarpolettes is a joyful blend of nature, memory, and amusement. The design is a tangible expression of the joy and innocence from our early years, our exhilaration today, and the anticipation of tomorrow's thrill.*

*With the same pastoral magic as a Rococo painting, a child soars high and touches the clouds with the tips of her shoes.*

*A veil of moisture that breathes through the mesh panels is released from a series of nozzles that run along the interior of the metal structure.*

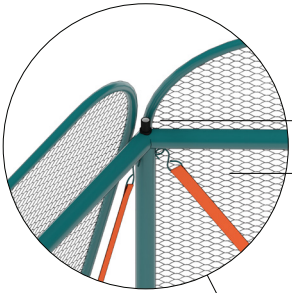

*Magical moments get suspended in time when the trajectories into the sky are bookended when our bodies inevitably stop their momentum, and our feet once again greet the forest floor.*

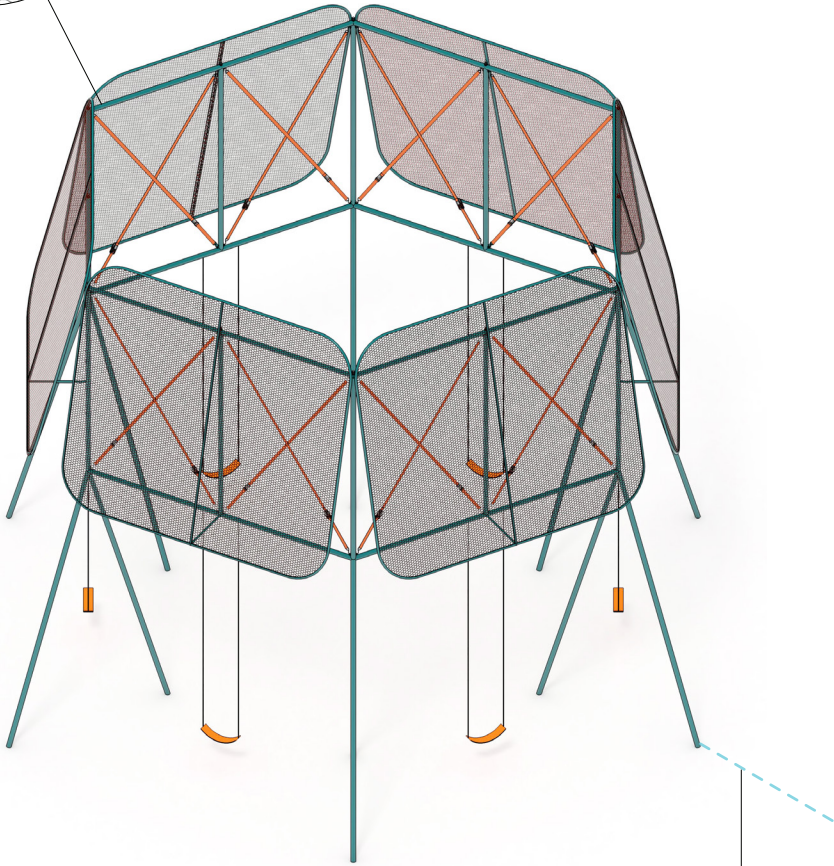

*Anchored in the lush garden room by the spotlight of a warm sun, L'Escarpolettes stands proudly on the ground surrounded by a verdant forest of trees and vegetation. The only sound that interrupts the soothing whisper of condensing vapour is the laughter of visitors as they rush towards the vibrant orange swings.*
