

Sensational Connections

Cultivating a Garden of Experiences

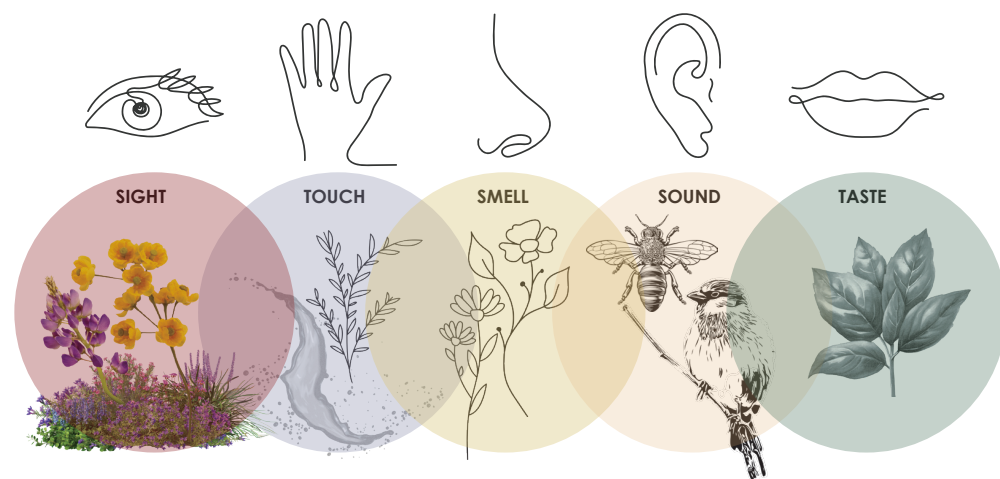

Walking through the garden, your senses are ignited. There are bees buzzing and crickets chirping through the weeds. This pavilion aims to show the possibility of all five senses coming to life. The pavilion is constructed of natural bamboo arranged in overlapping circles that lead you through the experience.

While traversing through the structure, one is taken on a journey of all the senses but with each area overlapping. Upon entrance, a low pool of water attracts birds that bring a soft noise to the site. Moving to the next circle, fabric is draped overhead to stimulate sight and sound. The next connection is a pool of water that one can splash in and hear. A group can rest under the dappled light of the next bamboo structure. Finally, one can exit and rest their elbows upon the table like structure with plants and herbs that stimulate the sense of taste by their smell. Plants define the outer boundaries of the site and areas to meditate. Plants are placed to stimulate different senses along the path.

With this design, *The Ecology of Possibility* has come to life.

Plan 1/8" = 1'0"

The Five Senses Stimulants

Sight: Bright flowers, fabric, dappled light, structure, water

Touch: water, tall grasses, bamboo poles, fabric, gravel

Smell: flowers, wood, grass, fresh water, herbs

Sound: bees, birds, bamboo, wind, water, gravel, leaves

Taste: herbs, table, water

Plant Materiality and Experience
