

The Garden of Conversation

The world is constantly changing. Civilizations permeate each other, and we are all repeatedly influencing or being influenced. There are conflicts, learning, and then integration between local culture and foreign culture. The postcolonial boundary is dynamically blurred. The way to promote mutual understanding between different cultures is dialogue. The world today still needs effective dialogue. The green space in the Dialogue Garden symbolizes the five major continents in the world. A boundary that combines the virtual and the real is established in the center of the garden, and the boundary changes through the interaction of visitors. As the boundary changes, the space also changes. The expansion of one side will compress the space on the other side, and at the same time open up new channels to promote the mutual exchange of the spaces on both sides.
