

Gleb Dusavitskiy

Hello my Name is Gleb Dusavitskiy, I am an Artist from Denmark, In this document I presenting you project "Transcendence" for the INTERNATIONAL GARDEN FESTIVAL 2025 26th EDITION

Exploring the theme: Borders

Transcendence is a designed garden project that explores the concept of borders—both physical and metaphysical—through an immersive and interactive experience. This garden serves as a transformative space where we can examine the theme of borders in various forms.

Design Concept:

Central to the garden is an elegant open-frame architectural structure that symbolizes the fluidity of borders. These borders are easy to cross and ephemeral, yet they create a distinct space of comfort. The structure invites exploration and reflection, encouraging visitors to contemplate the nature of boundaries in their lives. As they move through the structure, they experience a blend of openness and enclosure, evoking a sense of freedom within defined spaces.

A staircase leads to the first level, allowing visitors to explore borders on a more philosophical and metaphorical level. Often, the invisible borders are those that create separation among us. The design acts as a metaphorical bridge, facilitating the crossing of these unseen barriers.

Experience and Interaction:

Visitors are encouraged to interact with the “Transcendence” garden by experiencing firsthand the act of crossing through its borders and levels. This engagement will foster a deeper understanding of how boundaries can shape their perceptions and relationships.

Symbolic Message:

“Transcendence” challenges the perception of borders as barriers, presenting them instead as opportunities for exploration, connection, and growth. This garden project aims to inspire visitors to embrace the fluidity of boundaries, recognizing that they can serve as bridges rather than walls. Through the interplay of architecture and nature, “Transcendence” invites everyone to transcend their limits and discover the beauty that lies beyond.

Thanks
