

The Black Mat

The Black Mat provokes the visitors to sense between the industrial materials that feel brut to be the tender feeling of the playground space. The users can sit, walk through the poles, laydown and crawl with this. The black& dark mat emerging on the yards invites visitors to test the softness with hard colors.

The main material is insulation tube or EPDM based elastomeric thermal insulation, which can be reused from the construction, if possible.

The mat is assembled by the woven elastic flex tubes.

The iron wired covered by the flex tube is main arch, and the flex tube are used to make the woven, which reinforce the whole part like tunnel.

This installation is an allegory of the adaptation from the industrial fixture to the intimate enjoyment.
