

01 TO PRONAT

(Touches and Perfumes of Nature)

The articulation of the project is based on the installation of volumes and surfaces capable of enveloping people in unusual sensations. The interaction with the public is based on making people discover, by advancing inside a garden equipped with a walking axis and a lighthouse tree that helps to find the exit, different episodes of how we can interact with the plant world, receive benefits but above all an education in relationship. It is intended for the audience to fully immerse themselves in the canopies of the turf like plant walls, even enjoy a leafy and floral shower to fully achieve interaction with more than 24 species, witnessing different biological forms but most importantly each one endowed with a factor that can attract people's instinctive curiosity. Our hope is that people, barefoot in the garden, will walk through it and arrive at the end guided by the whiteness and tranquility of the red willow foliage of the Italian peasant tradition with a smile on their lips and their hands full of sensations.
