

A Slowly Turning Garden

JARDINS DE MÉTIS 2026

Our proposal is a trail and canopy that awakens sensory awareness. As one walks, filtered light dances through leaves, birdsong mingles with rustling branches, earthy scents rise from native plants, wildflowers brush fingertips, and shifting breezes cool the skin, which immerse the visitor in a living, responsive ecological map.

The figure of the canopy is a nod to the ever changing patterns of light and shadow within the forest. As the sun moves across the sky, its path is traced by the contours of the canopy. Below, native plants spring up in patterns responding to the play of sunlight and shadow across the ground.
