

AWAKENING GROUNDS

The coffee we often drink in our daily lives produces coffee grounds during the production process, and most used coffee grounds are incinerated, releasing carbon dioxide that negative affects on the environment. We've seen these problems in terms of "environmental sensitivity." Environmental sensitivity refers to the ability to keenly recognize changes in the environment and translate them into action. In other words, it is the prespective of re-examining the resources discarded in everyday life and discovering new possibilities within them.

From this perspective, we aimed to create a garden that recycles used coffee grounds. Used coffee grounds are not just waste, they are also a material that can return to nature. he garden created using this will bring about a change in the way people think about the environment and convey the message that "small changes in perspectives can change the earth."

The user will be able to pass through obstacles and encounter an open garden at the destination. The coffee deck presents several options, but provides no clear answer. This symbolizes the process by which we find answers on our own, and through this garden, we want to reflect on the relationship between nature and humans.

Plantlist

Coffee wall & Wire mesh

The coffee wall is an element that blocks us, but it is something that we can remove sufficiently through external factors. On the other hand, wire nets indirectly block our field of view, but they directly show nature's egenerative power over time.

Coffee Deck

The coffee deck presents us with various directions (routes), but we cannot provide the correct answer. Therefore, we have to walk around and find the answer directly.
