

# NANO PARK

“Nano Park” is a space inspired by the invisible microscopic world. By magnifying ecological elements such as plant tissues, insect habitats, and delicate natural patterns, it reveals the beauty of intricacy and precision that often goes unnoticed in the vastness of nature.

The space is composed of multiple small modules—each independent yet organically connected. These modules come together like sculptural fragments, forming a flexible structure that allows for change and reconfiguration.

Within this miniature world, visitors experience nature anew through their senses—sight, touch, and smell. The ecoboxes placed above the planting boxes provide shelter for insects and birds, while the rest boxes are designed at a human scale, allowing visitors to feel the texture and fragrance of plants at hand’s reach. The circulation box collects and recycles rainwater, visually expressing the ecological cycle through gentle water flow.

Nano Park embodies a sensory landscape created by small yet powerful units of life—an ever-changing, living world of nature that responds and breathes with every moment of human presence.

## PLANTING PLAN

Yellow Gumjinhwa

Pringed Gentian Silver

Cherry Blossom

Raspberry

Sphagnum capillifolium

Hypnum imponens

Pleurozium schreberi

fig tree
