

# Sensational Senses

Do you remember a time when you ran through a field and ran your hands through the wheat, or listened to the bird's chirp uninterrupted? Those senses helped you create memories along with lighting up your experience, making it more sensational. Our senses help to do everything, taste, touch, sight, smell, hear; all our senses are connected and are always working. This garden design plays on the interconnectedness of how we experience our senses. Design includes factors of touch, smell, hearing, sight, and taste throughout the garden through the use of plant material and soils and rocks. Each "bubble" helps to showcase one sense at a time and as they blend, then experience another lone sense as you continue your journey throughout the garden. In each bubble, visitors are welcome to use their senses for which sense bubble they are in. When in the taste sense, vegetation that is edible, touch, the vegetation presents with spikes, leafy shrubs and more for visitors to feel invited to touch the vegetation. The smell, vegetation is aromatic and brings vibrance from flora, and visitors are encouraged to stop and listen to the sounds of wind running through the leaves of the vegetation.
